

QUALITY, ENVIRONMENT, ENERGY AND SAFETY POLICY - SUSTAINABILITY

We live in a time of dramatic changes. Mankind is facing the aftermath of an anthropization process that did not take into account respect for the Planet hosting us and for the other living species.

European Commission means to put in place an ambitious program aimed at mitigating climate changes and consistently reduce GHGs emission, which will deeply affect our whole life.

SO.G.I.S. is committed to actively join the new cultural approach and, to that end:

- Deems that a cascade use of raw materials has to be endorsed and has been striving for years to foster a legislation promoting biomass cascade use
- Has carried out an O – LCA Analysis and is committed to widen the sustainability analysis even to single product categories.
- Is engaged in looking for solutions to reduce GHGs emissions

SO.G.I.S. signed up the Responsible Care program, endorsing sustainable development. We have always been mindful to the adoption of safe and environmental friend production processes and to the safeguard of people and environment.

Production of safe and law compliant substances/mixtures is the first priority for SO.G.I.S..

Over the years, SO.G.I.S. has always put in place decisions aimed at avoiding use and production of polluting or dangerous substances/mixtures. Many substances we use are exempted from Registration according to Regulation 1907/2006/EC (REACH), almost no one is classified as dangerous for the environment or human health according to Regulation 2008/1272/EC (CLP).

To endorse those principles, SO.G.I.S. has taken the decision to join "The Roundtable on Sustainable Palm Oil" (RSPO), a global multi - stakeholders initiative on certification of products derived from sustainable Palm Oil.

The main target of RSPO is "fostering the development and use of sustainable Palm Oil via the cooperation within the supply chain and open a discussion among the stakeholders".

All our packaging is recycled. Over the time we've always been trying to considerably reduce packaging, both recommending customers to switch from paper bags to big bags, and adopting technologies allowing transport in bulk of powders.

According to our managing Systems, every year we implement improvement projects aimed at developing every process within the Company. ISO 9001, ISO 14001, ISO 45001, ISO 50001, *RSPO Supply Chain Certification Standard and GMP+B1 standard* Systems urge all employees to act with sense of responsibility and in compliance with EU Regulations and Italian laws.

SO.G.I.S. INDUSTRIA CHIMICA S.p.A.

Capitale Sociale € 2.500.000,00

6048 SOSPIRO (Cremona) - Italia

Posizione Export n. CR 000759

Even in this perspective Company Directors are committed to:

- *Purchase sustainable raw materials and increase Company sustainability*
- *Guarantee Safety of products intended for animal feeding, implementing an HACCP System constantly updated, in compliance with GMP+ B1 standard;*
- *Comply with all EU Regulations and local Norms for every industry sector;*
- *Comply with health and safety, environment and Energy law requirements and with every Norm, Agreement or contract signed, suitable to rule those sectors;*
- *Put in place all necessary measures to avoid dangers and reduce risks in order to guarantee a safe and healthy working environment to prevent accidents and professional diseases;*
- *Foster and disseminate customer satisfaction, land and environment protection, pollution prevention, workers safety culture;*
- *Involve personnel in efficient Energy managing, endorsing their skills and care*
- *Motivate, make conscious and enhance people through training and education of all of them;*
- *Engage and consult employees on health and safety questions, even via their representative (RLS);*
- *Continuously improve processes, products, services and Company performances to make them more and more environmental friends and use low environmental and Energy impact technologies and products respecting land, safety and people health.*
- *Make available economic and financial resources for sustainable investments, contributing to Energy efficiency improvement.*
- *Make available data and information suitable to support power and fuel consumption monitoring, as well as parameters affecting Energy consumption and, in general, Energy System performances and definition and monitoring of suitable improvement targets.*
- *Choose, where possible, purchase of products, machineries, plants, technological solutions and Energy efficient services.*
- *Endorse design activities taking into account energy performance improvement and reduction of GHGs emissions*
- *Respecting provisions of RSPO Supply Chain Certification Standard.*
- *Pursuing respect for provisions envisaged by animal feeding managing System, according to GMP+B1 standard.*

Even to realize those commitments, the Company has adopted a managing System according to ISO 9001, ISO 14001, ISO 45001, ISO 50001, *RSPO Supply Chain Certification*, GMP+B1 standards, involving all SOGIS personnel for its implementation and continuous improvement.

Quality, Environment, Energy and Safety Policy is a key part of the Company strategy aimed at improving productivity, profitability, reliability and image.

Directors define on a yearly base improvement targets on which measuring and evaluate validity and effectiveness of its managing system and make available adequate tools and resources.
